Chapter Leaders 5

Editor's Hangar 6

Guest Editorial

By Rich Davidson
Lee Bottom Flying Field

Did you feel that America? When you woke up, could you sense the change in your status? Only yesterday you were an upstanding citizen merely washing your car as your kids played with their radio controlled quad-copter. Today though you're the parent of criminals doing something that could cost you tens of thousands of dollars in fines. What is it? It's their toy of course. Haven't you heard?

If you've been following politics in 2014, you most surely have heard about the EPA's attempt to regulate non-navigable waterways. What are non-navigable

waterways? Well, in short, they're that ditch in your yard and the pond you built into the landscaping. Yes, that's right. The EPA wants to have regulatory control of your ditch. And

what does that mean to you? For starters, washing your car at home could generate huge fines if it can be determined anything other than pure water flowed off your vehicle and into the drain. Even silt, fine dirt, could land you in big trouble. Crazy isn't it? But that's not your problem.

Welcome to The Lippisch Letter!

This is your Lippisch Letter. The only way to keep it alive is for you to help. What trips your trigger in aviation? Building, Flying, Restoring, Hangar Flying? Is it all about aluminum, steel tube & fabric, composites, wood, avionics, engines, or none of the above? Are you a fixed wing fan, balloon lifter, whirly girl, glider guy, seaplane sailor? Do you teach kids or adults? Tell us about your travels, your adventures, and your tests. Believe it or not, you are all experts in something. Share that vast knowledge, and we will all get smarter.

Show us photos from your flight breakfast adventure, your aircraft project, or you sharing aviation with friends young and old. Let's make The Lippisch Letter a new source of fun!

Guest Editorial

continued

No, your problem is that cute little 8" toy quad-copter you bought your kids. As of November 18th, that toy falls under the jurisdiction of the FAA. And, like every plane in the country, it is subject to the rules of airspace. But wait, you're off the hook because your kids aren't flying their toy in any airspace, right? Wrong! It's time to get educated.

You see, the FAA was the original EPA. In fact, in many ways the FAA was, and still is, a primary incubator for onerous government

oversight ideas. Long before the EPA, TSA, DOE, and others, the FAA had established itself as an eight headed hydra willing to test the governmental limits of ethics, bureaucracy, and common sense. It restricted free enterprise, stood in the way of advancement, made up rules on the fly, told pilots how they could live, companies when they could operate, and collected data on everyone so it could be used against them should the need arise.

The amount of medical information alone that is collected on pilots would startle most civil liberties

champions. If you want to enjoy the greatest freedom known to man, you're going to have to tell them if you have herpes. Whatever the condition, real, possible, or imagined, the FAA insists on knowing about it when you renew the medical required to have a license. And just to be sure you don't forget to list a doctor's visit, occasionally they find some poor soul who forgot to report a trip to the emergency room for a cut to

the hand and fine

her a couple grand and take her license just to make a point; DON'T CROSS US OR YOU'LL BE SORRY. On its finest day, it is a disgusting, irregular, vindictive beast ruled by agents that would make the Matrix envious.

If you're getting concerned, you should be. Would you like to know how your kids were turned

into criminals? Basically speaking, the NTSB is to the FAA what the FISA court is to any government agency that wants to snoop on Americans. Little more than a federal organization designed to find the most convoluted and expensive solutions to problems that don't exist, the NTSB rules so often in favor of the FAA that to describe it as often isn't telling the whole story. The official story, just like the FISA court, is that it is unbiased and makes decisions based on facts and logic. The real story is that the NTSB lives and breathes to give support to any governmental agency, especially the FAA, anytime it asks for backup. And guess what, the FAA asked for it.

Yes, just like that poor soul who forgot her visit to the ER, a gentleman was recently targeted for

using his quad-copter, also commonly called a drone, to capture some video of the University of Virginia. The FAA, for whatever reason, got involved and decided to make an example of Mr. Pirker. A \$10,000 fine is what he got

Guest Editorial

continued

for “operating an aircraft in a careless and reckless manner”. That’s the catch all phrase the FAA has used to kneecap pilots for generations. Like a cop planting drugs on a clean driver, when the FAA has nothing on a pilot but really wants to get the bust, this is the wording they use. Fortunately though, a federal judge disagreed with their verdict and overturned the fine. That’s when the agency called their friends at the NTSB.

You know where this is going, don’t you? Upon hearing the case, the NTSB ruled in favor of the FAA. Unfortunately for your kids, in order to pass this judgment on Mr. Pirker, they also had to define what an aircraft was. This is what they came up with – any device used for flight in air to include manned or unmanned, large or small. Did you get that? The

NTSB just gave the FAA regulatory control over everything from spaceships to paper airplanes. Did I mention that includes the airspace all the way to the ground?

Just in case you’re sitting there in disbelief, for the purpose of clarity, let me spell it out. The FAA now has regulatory control over every square inch of airspace in your yard starting at ground level. If you fly a model anywhere in that airspace you are subject to FAA interpretations of use and you could be fined. Of course, with them having achieved this so easily, I’m sure the EPA is insanely jealous and will be working overtime to get control of your ditch. If you don’t want to be fined for the water dripping off your car, you better call your representatives and give them an earful. Sadly though, it’s too late for your kids. They’re practically felons and all they did was enjoy the great American dream of flight.

Chapter 33

Communications Corner

These days, there must be a million ways to communicate inside and outside an organization. Here are just a few ways Chapter 33 currently communicates with you:

Newsletter: The Lippisch Letter

Website: www.EAA33.org

Facebook: EAA Chapter 33

YahooGroups.com:

EAAChapter33

Email:

Leader emails & phones on page 7

Email:

EAAChapter33@yahoo.com

These are low-cost methods of keeping us in touch with each other. Why is this important? Because we are more effective if we stick together. We can respond to legislative challenges faster (user fees anyone?), we can learn faster (who knows where to find the chapter scales?), we can participate quickly (who’s going to Sully for breakfast?), etc.

We have the capability to post files, photos, internet links, calendar items, our membership list, and much more.

Please take advantage of all this communications capability. The more we use it, the better we get.

The general public has no idea what aviation is or what it’s about, except what they learn from the media, and you know that isn’t good. Let’s use these tools to also help educate them so they can see why we love aviation!

2014 EAA Chapter 33 Leadership

by Tim Busch

Mike Jimenez has volunteered to be the chapter vice president if we'll have him, but we still need a program chair and a fund-raising chair for 2015. Others may be available as well (president and newsletter editor, for example!), so if you have any interest in helping this outstanding organization, please let me know.

This is a great time to give back to *your, local, aviation* organization. Chapter 33 has been active in the area for over 50 years, and we're not about to stop now!

Don't worry about being new to aviation. The best way to learn anything is to get involved.

Working together, we will contin-

ue to learn and grow Chapter 33, and aviation in general.

Elections will be held at the January meeting. We need you!

Come join us.

- Tim

The Editor's Hangar

by Tim Busch

There seems to be lots of interest in “drones” lately, with the FAA putting out proposed rules, and the media feasting off the controversy.

I did an interview on WMT-AM radio last week, discussing “drones” and their effect on aviation and specifically GA. The interviewer didn’t get a lot from me, although I made it clear that the proper term is UAV/UAS.

In light of all the drone discussion, Rich Davidson’s blog post seemed appropriate. Rich pulls no punches. He and his wife Ginger run a private field in Southern Indiana and host an outstanding fly in. We’ve spoken electronically, but haven’t met. I need to get over there to the flight breakfast and meet in person.

out his pilot simulation course and seeing how a student could reduce his/her training hours by using a graded simulation. It appears to have real potential to reduce training costs and increase the quality of instruction.

My school will likely become a beta test site for his method. If it makes more and better pilots, I’m happy to help bring it to the industry.

to do with the chapter, and anything else we can use to learn to make the chapter better. I’m open to your input on what we should be asking the membership. This is YOUR chapter, so let’s work together to make it better.

Mike Jimenez has stepped up to the Chapter Vice President position. Welcome Mike! Mike and Sarah are working on an RV-10, so I look forward to hearing their builder reports.

February 25th, and we’re getting 8–10” of snow today, along with a predicted low of -15 degrees. I guess that’s just another day in Iowa, but it’s getting old quickly. I had to cancel flights today and tomorrow that I would really have preferred to do, but there is no point fighting mother nature. What are YOU doing to maintain flying proficiency through this long winter?

I am putting together a survey of questions for the chapter membership. It will include finding out about your aviation background and experience and what you want

=====

I got the chance to meet with someone well known in the aviation industry. After meeting him a few years ago and spending time discussing the future of GA, we agreed to continue talking about ways to grow GA.

I had the chance to meet him at his business and see what he was up to. It was really nice to see someone with some vision in the industry.

We spent an entire morning with him and his staff, trying

=====

We still need a Program Director. This is a key link to keeping our members interested and involved in the organization. If you or anyone you know might be interested, please let me know. We need you!

Blue Skies!
Tim

EAA Chapter 33 Application & Questionnaire

Name: _____

EAA #: _____ expires: _____ Young Eagles # _____

Address: _____

City: _____ State: _____ Zip: _____

Daytime Phone: _____ Evening Phone: _____

Email Address: _____

Copilot's Name: _____

Pilot Ratings (if any) _____

Aircraft Owned and/or Flying (if any): _____

Aircraft Under Construction / Restoration (if any): _____
