

# EAA106 ON-LINE: Live from Bob's hangar - Avionics Upgrade to an EFIS

**WHEN:** SATURDAY, April 18, 2020 - 7 PM (eastern)

We hope everyone is doing well and if not flying, we hope you're dreaming of aviation. We're here to help with that dream as we present some live, on-line programs -- IMC, VMC and other program, such as this Saturday's.

**WHAT: ON-LINE and LIVE from Bob's hangar:**

**Upgrade to an EFIS - including a look at the RV-8 panel, behind the panel, inside the fuselage, and the units to be installed.**

**SPEAKER: Bob Di Meo --**

Builder/pilot of an RV-8 (the one we will see on Saturday's video conference), EAA Technical Counselor and EAA Flight Advisor, ATP, CFI, former EAA106 VP, and more.

Bob's description about this live program: -----

After flying almost 13 years with a conventional instrument panel I've finally decided to upgrade to an EFIS; not that the original panel is still not perfectly capable of all that I ask of it. Still, It was time that I looked at some upgrades and after flying behind the Aspen 1500 in my company's C-340 I've finally gotten comfortable with it and it's capabilities.

My decision was to go with an Aspen E5 connected to my TruTrak Vizion 385 and Garmin 430W.

I'll be taking the visitors through why I chose the Aspen E5 over all the others, how it will work with the TruTrak and Garmin and what my plan is to do the installation. I'll also discuss all the issues I'll have to take into considerations while I'm making the change.
