Trustee(s) at Large -
Clint Ray (810) 223-6819
David Hubbard (734) 395-2395

Chapter Member Projects

Many of our local 384 Chapter Members are working on their own aircraft. We try to spend a little time at each meeting for the members to update the crowd on their recent progress on their aircraft. The following are projects known to be working in or around the airport: A Wag Aero Wagabond, An RV 12 project, a Zenith Cruiser, a Hatz CB-1 biplane and a Pre-war Taylorcraft restoration. If you are working on a project and would like to update the crowd, please drop by the meeting this Wednesday.

Aviation History from the Month of May

June 5, 1989: The massive Antonov An-225 Mriya flies in to Paris-Le Bourget for the 1989 Paris Air Show, carrying the Soviet Shuttle Buran on its back. When it takes off from Kiev to fly to Paris, the combination has a takeoff weight of 1,234,600 lb., the greatest weight ever lifted into the air.

June 11, 1926: The first flight of the Ford A-AT trimotor, an all-metal monoplane which competes with the three-engine Fokker and becomes a pioneer American airliner. It is known affectionately as the "Tin Goose."

June 20, 1951: The first flight of aircraft with variable-sweep wings is made as the research aircraft Bell X-5, flies for 30 minutes at Edwards, California.

June 26, 1909: The first commercial sale of an airplane in the United States is made as Glenn H. Curtiss sells one of his planes to the Aeronautic Society of New York for \$7,500. This action spurs the Wright brothers to begin a patent suit to prevent him from selling airplanes without a license.

June 27, 1923: The first refueling in mid-air (with hose) of one airplane by another is made by a De Havilland D.H.4-b from another one over San Diego, California. The planes are flown by Capt. L. H. Smith and Lt. J. P. Richter.
