# 6/23 9:00AM

Aviation weather source information extracted from Leidos Flight Service (LFS) (<u>www.1800wxbrief.com</u>). LFS converts UTC (Coordinated Universal Time) to EDT (local time) for readability. This same information is also given at the NOAA Aviation Weather Center (<u>www.aviationweather.gov</u>).

For me personally for the YE event, I will be monitoring the KCLE forecast. If IFR conditions exist prior to and into the start of the 10AM event, I will not be departing KLPR until non-IFR conditions (MVFR or VFR) conditions exist. Even if MVFR conditions exist, I will require a 2,000 ft. ceiling and 6 or more miles of visibility to consider flying YE. Example: For the 6/23 9:40AM observation, at 1400Z or 10AM EDT, KCLE is forecasting IFR conditions. MVFR is forecast for 1500Z or 11AM EDT. However, the ceiling is at 1,500 ft. I will not depart KLPR under these conditions for the YE event.

# Observation: 6/23 9:40 AM EDT
